

Basic information

Function name

Enter a name that describes the purpose of your function.

myStopinator

Function name must be 1 to 64 characters, must be unique to the Region, and can't include spaces. Valid

Runtime

Info

Choose the language to use to write your function. Note that the console code editor supports only Node.js

Python 3.11

Durable execution - new

Info

Enable durable execution to simplify building resilient multi-step applications that checkpoint progress

☐ Enable

Architecture

Info

Choose the instruction set architecture you want for your function code.

☐ arm64

☒ x86_64

Permissions

Info

By default, Lambda will create an execution role with permissions to upload logs to Amazon CloudWatch

▼ Change default execution role

Execution role

To access other AWS services and resources your function needs an IAM role. Choose a role with the right permissions

☐ Create default role

☒ Use another role

myStopinatorRole

View role details in IAM

Trigger configuration

Info

EventBridge (CloudWatch Events)

aws asynchronous schedule management-tools

Rule

Pick an existing rule, or create a new one.

☒ Create a new rule

☐ Existing rules

Rule name

Enter a name to uniquely identify your rule.

everyMinute

Rule type

Trigger your target based on an event pattern, or a schedule expression

☐ Event pattern

☒ Schedule expression

Schedule expression

Self-trigger your target on an automated schedule

rate(1 minute)

e.g. rate(1 day), cron(0 17 ? * MON-FRI *)

lambda_function.py

```
1 import boto3
2 region = 'us-east-1'
3 instances = ['i-06ff16be698fc1876']
4 ec2 = boto3.client('ec2', region_name=region)
5
6 def lambda_handler(event, context):
7     ec2.stop_instances(InstanceIds=instances)
8     print('stopped your instances: ' + str(instances))
```

☐	Name	Instance ID	Instance state	Instance type
☐	Bastion Host	i-02ba135af6f02701b	Running	t2.micro
☐	instance1	i-06ff16be698fc1876	Stopped	t2.micro
