

To be recognized for excellent engineering, developing global leaders both in educational and research in the domain of computer science and wireless engineering.

1. To create self-learning environment by facilitating leadership qualities, team spirit and ethical responsibilities.
2. To improve department-industry collaboration, interaction with professional society through technical knowledge and internship program
3. To promote research and development with current techniques through well qualified resources in the area of computer science and wireless engineering.

JAIDEV EDUCATION SOCIETY'S
J D COLLEGE OF ENGINEERING AND MANAGEMENT

KATOL ROAD, NAGPUR

Website: www.jdcoem.ac.in E-mail: info@jdcoem.ac.in

(An Autonomous Institute, with NAAC "A" Grade)

Affiliated to DBATU, RTMNU & MSBTE Mumbai

Department of Computer Science and Technology

"A Place to Learn, A Chance to Grow"

Session: 2025-26

Experiment no-00

Aim: Introduction to Cloud Computing and Study of Service Models and Deployment Models

Theory:

Cloud computing means using computing resources (servers, storage, software, databases, networking) over the internet instead of using your own local computer or physical servers.

You can store data, run applications, and use software online anytime, anywhere.

Example:

Using Gmail instead of installing email software on your computer.

Cloud Service Models

1. Infrastructure as a Service (IaaS): Provides virtualized computing resources like virtual machines, storage, servers and networking. The user manages the operating system, applications, and data, while the cloud service provider manages the physical hardware, virtualization, and networking infrastructure.

Example: AWS EC2, Microsoft Azure VM, Google Compute Engine.

2. Platform as a Service (PaaS): Provides a development platform to develop, test and deploy applications without managing infrastructure. The user manages application code and data while cloud provider manages OS, runtime, middleware, infrastructure

Example: Google App Engine, Microsoft Azure App Service and heroku.

3. Software as a Service (SaaS): Provides ready-to-use software applications over the

To be recognized for excellent engineering, developing global leaders both in educational and research in the domain of computer science and wireless engineering.

1. To create self-learning environment by facilitating leadership qualities, team spirit and ethical responsibilities.
2. To improve department-industry collaboration, interaction with professional society through technical knowledge and internship program
3. To promote research and development with current techniques through well qualified resources in the area of computer science and wireless engineering.

Session: 2025-26

Cloud Deployment Models

1. Public Cloud: Cloud services are provided over the internet and shared among many users. *Example:* AWS, Azure, Google cloud.
2. Private Cloud: Cloud infrastructure dedicated to a single organization. *Example:* VMware, OpenStack, company's internal cloud.
3. Hybrid Cloud: Combination of public and private cloud.
Example: Sensitive data on private cloud, application on public cloud.
4. Community Cloud: Shared by organizations with similar requirements.
Examples: Government departments, universities.

Conclusion

Cloud computing provides scalable and flexible resources. Different service and deployment models help organizations choose suitable cloud solutions.
