

To be recognized for excellent engineering, developing global leaders both in educational and research in the domain of computer science and wireless engineering.

1. To create self-learning environment by facilitating leadership qualities, team spirit and ethical responsibilities.
2. To improve department-industry collaboration, interaction with professional society through technical knowledge and internship program
3. To promote research and development with current techniques through well qualified resources in the area of computer science and wireless engineering.

Experiment no-01

Aim: Install VirtualBox / VM ware Workstation with different flavours of Linux or windows OS on top of windows7 or 8.

Theory:

VMware is a virtualization software that lets you run multiple operating systems on one physical computer at the same time.

How it works

- Your real computer → called Host machine
- The virtual computer → called Virtual Machine (VM)
- Each VM can run its own OS like Windows, Linux, Ubuntu, etc.

Example:

You can run Ubuntu Linux inside Windows using VMware.

Steps to install Virtual Box:

1. Go to link on google virtualbox.org

Oracle Virtual Box

After successfully install oracle virtual box Steps to import operating system on virtual box :

Steps :

1. Open Virtual box
2. Click on new button to create VM
3. Setup guest OS installation
4. Setup virtual hardware
5. Click finish and start operating system

Conclusion

In this experiment, VirtualBox / VMware Workstation was successfully installed on a Windows 7 / Windows 8 host system. Different operating systems such as Linux and Windows were installed as guest operating systems using virtual machines. The installation process demonstrated how virtualization allows multiple operating systems to run on a single physical machine without affecting the host system.
