

JAIDEV EDUCATION SOCIETY'S
J D COLLEGE OF ENGINEERING AND MANAGEMENT
KATOL ROAD, NAGPUR

Website: www.jdcoem.ac.in E-mail: info@jdcoem.ac.in

(An Autonomous Institute, with NAAC "A" Grade)

Affiliated to DBATU, RTMNU & MSBTE Mumbai

Department of Computer Science & Engineering

"A Place to Learn, A Chance to Grow"

VISION

To be recognized for excellent engineering, developing global leaders both in educational and research in the domain of computer science and wireless engineering.

MISSION

1. To create self-learning environment by facilitating leadership qualities, team spirit and ethical responsibilities.
2. To improve department-industry collaboration, interaction with professional society through technical knowledge and internship program.
3. To promote research and development with current techniques through well qualified resources in the area of computer science and wireless engineering.

Department of Computer Science & Engineering

B. Tech. in Computer Science & Engineering V SEM /3rd Year Syllabus: 2026-27

"A Place to Learn, A Chance to Grow"

VISION

To be recognized for excellent engineering, developing global leaders both in educational and research in the domain of computer science and wireless engineering.

MISSION

1. To create self-learning environment by facilitating leadership qualities, team spirit and ethical responsibilities.
2. To improve department-industry collaboration, interaction with professional society through technical knowledge and internship program.
3. To promote research and development with current techniques through well qualified resources in the area of computer science and wireless engineering.

Program: B. Tech. in Computer Science & Engineering

Semester	Course Code	Name of the course	L	T	P	Credits
V	CS5T001	Database Management Systems	2	0	0	2

Prerequisites for the course

1.	Basics of Data, Database, Data Management Tools.
2.	Fundamental of File, File Organization etc.

Prior Reading Material/useful links

1.	https://onlinecourses.nptel.ac.in/noc23_cs29/preview
2.	https://www.techtarget.com/searchdatamanagement/definition/database-management-system
3.	https://www.youtube.com/watch?v=c5HAwKX-suM

Course Outcomes:

Sr. No	Course Outcome No	CO statement
1	CO1	Student will be able to understand fundamentals of database management system.
2	CO2	Student will be able to classify the different query development knowledge.
3	CO3	Student will be able to apply modelling and normalization to databases.
4	CO4	Student will be able to analyse query processing and optimization techniques.
5	CO5	Student will be able to evaluate the File Organization, Indexing and exhibit the knowledge of transaction and concurrency control.

Syllabus:

Course Contents		Hours
Unit I	Introduction to Database Systems: Significance and advantages, Types of Databases, Limitations of File processing system, the DBMS Environment, Data Abstraction, Data Independence, Data Definition Language (DDL), Data Manipulation Language (DML).	05

**JAIDEV EDUCATION SOCIETY'S
J D COLLEGE OF ENGINEERING AND MANAGEMENT

"A Place to Learn, A Chance to Grow"

VISION

To be recognized for excellent engineering, developing global leaders both in educational and research in the domain of computer science and wireless engineering.

MISSION

1. To create self-learning environment by facilitating leadership qualities, team spirit and ethical responsibilities.
2. To improve department-industry collaboration, interaction with professional society through technical knowledge and internship program.
3. To promote research and development with current techniques through well qualified resources in the area of computer science and wireless engineering.

	Data models: Evolution of Data Models, Entity-relationship model, Relational integrity constraints, data manipulation operations.	
Unit II	Relational query languages: Relational algebra, Tuple and domain relational calculus, SQL3, DDL and DML constructs, Open source and Commercial DBMS – MYSQL, ORACLE, DB2, SQL server.	05
Unit III	Relational database design: Normalization of Database Tables: Need and Significance, Domain and data dependency, Armstrong's axioms, Normal forms, Dependency preservation, Lossless design.	05
Unit IV	Query processing: Evaluation of relational algebra expressions, Query equivalence, Join strategies.	05
Unit V	File Organization and Indexing: Indices, B-trees, hashing. Transaction processing: Concurrency control, ACID property, Serializability of scheduling, Locking and timestamp based schedulers, Multi-version and optimistic Concurrency Control schemes, Database recovery.	06

1. To create self-learning environment by facilitating leadership qualities, team spirit and ethical responsibilities.
2. To improve department-industry collaboration, interaction with professional society through technical knowledge and internship program.
3. To promote research and development with current techniques through well qualified resources in the area of computer science and wireless engineering.

Program: B. Tech. in Computer Science & Engineering

Semester	Course Code	Name of the course	L	T	P	Credits
V	CS5T002	Machine Learning	2	0	0	2

Prerequisites for the course

1.	Understanding how to load, clean, manipulate, and explore data is crucial.
2.	Basics of common algorithms and data structures.

Prior Reading Material/useful links

1.	https://www.javatpoint.com/machine-learning
2.	https://www.tutorialspoint.com/machine_learning/index.htm
3.	https://onlinecourses.nptel.ac.in/noc23_cs18/preview

Course Outcomes:

Sr. No	Course Outcome No	CO statement
1	CO1	Student will be able to understand the basics of machine learning and its components.
2	CO2	Students will be able to explain the decision tree learning algorithms to classify multivariate data.
3	CO3	Students will be able to interpret the Bayesian Learning for finding relationships between data variables.
4	CO4	Students will be able to develop and apply Linear Models for Regression algorithms for learning to control complex systems.
5	CO5	Students will be able to write scientific reports on computational machine learning methods, results and conclusions.

Syllabus:

Course Contents		Hours
Unit I	Introduction: Well-posed learning problems, designing a Learning System, Perspectives and Issues in Machine learning, Concept Learning and General-to-specific Ordering: A concept learning task, Concept learning as Search, Finding a maximally specific hypothesis, Version Spaces and Candidate elimination algorithm, Inductive Bias.	05

To be recognized for excellent engineering, developing global leaders both in educational and research in the domain of computer science and wireless engineering.

MISSION

1. To create self-learning environment by facilitating leadership qualities, team spirit and ethical responsibilities.
2. To improve department-industry collaboration, interaction with professional society through technical knowledge and internship program.
3. To promote research and development with current techniques through well qualified resources in the area of computer science and wireless engineering.

Unit II	Unsupervised Learning: Clustering Learning from unclassified data, Hierarchical Agglomerative Clustering, k-means partitional clustering, Batchler and Wilkin's algorithm, Study of Supervised learning and Reinforcement Learning.	05
Unit III	Bayesian Learning: Bayes theorem and concept learning, Maximum likelihood and least square error hypotheses, Minimum description length principle, Bayes optimal classifier, Gibb's algorithm, Naive Bayes classifier, Computational Learning Theory: Probably learning an approximately correct hypothesis, PAC learnability, The VC dimension, the mistake bound model for learning.	05
Unit IV	Linear Models for Regression: Linear basis function models, The Bias-Variance decomposition, Bayesian Linear Regression, Bayesian Model comparison, Kernel Methods: Constructing kernels, Radial basis function networks, Gaussian Processes, Ensemble Learning: Bagging, boosting, and DECORATE. Active learning with ensembles.	06
Unit V	Decision Tree Learning: Decision tree learning algorithm, Hypothesis space search in decision tree Evaluating Hypothesis: Estimating Hypothesis accuracy, Basics of sampling theory, deriving confidence intervals, Hypothesis testing, comparing learning algorithms.	05

3. To promote research and development with current techniques through well qualified resources in the area of computer science and wireless engineering.

Program: B. Tech. in Computer Science & Engineering

Semester	Course Code	Name of the course	L	T	P	Credits
V	CS5T003	Internet of Things	2	0	0	2

Prerequisites for the course

1.	Knowledge of Computer networks, LAN, WAN & MAN
2.	Study of Protocols, Sensors, basics of IoT.

Prior Reading Material/useful links

1.	https://www.youtube.com/watch?v=6mBO2vqLv38
2.	https://www.internetsociety.org/iot/
3.	https://www.forbes.com/sites/bernardmarr/2021/12/13/the-5-biggest-internet-of-things-iot-trends-in-2022/

Course Outcomes:

Sr. No	Course Outcome No	CO statement
1	CO1	Student will able to Identify the different technology.
2	CO2	Student will able to Apply IoT to different applications.
3	CO3	Student will able to Analysis and evaluate protocols used in IoT.
4	CO4	Student will able to Design and develop smart city in IoT.
5	CO5	Student will able to Analysis and evaluate the data received through sensors in IoT.

Syllabus:

Course Contents		Hours
Unit I	IoT Introduction: Origin of IoT, IoT and Digitization, IoT Impact, Convergence of IT and IoT, IoT challenges, Need of IoT, IoT features, Bulding blocks of IoT, IoT Network Architecture and Design, Drivers Behind New Network Architectures, Comparing IoT Architectures, The Core IoT Functional Stack, IoT Data Management and Compute Stack. IoT Things : Sensors and Actuators	06
Unit II	IoT Ecosystem: Three layered architecture, five-layer architecture, cloud computing, fog computing, IoT taxonomy. Connectivity Terminology: IoT LAN , IoT WAN, IoT Node, IoT Gateway.	04

2. To improve department-industry collaboration, interaction with professional society through technical knowledge and internship program.
3. To promote research and development with current techniques through well qualified resources in the area of computer science and wireless engineering.

Program: B. Tech. in Computer Science & Engineering

Semester	Course Code	Name of the course	L	T	P	Credits
V	CS5E001A	PEC-I (Block Chain Technology)	2	0	0	2

Prerequisites for the course

1.	Basic knowledge of Blockchain Technology with uses & applications.
2.	Basics of Operating Systems, Cryptography and Network Security.

Prior Reading Material/useful links

1.	https://onlinecourses.nptel.ac.in/noc22_cs44/preview
2.	https://nptel.ac.in/courses/106105235
3.	https://www.ibm.com/topics/blockchain

Course Outcomes:

Sr. No	Course Outcome No.	CO statement
1	CO1	Student will able to Understand emerging abstract models for Blockchain Technology.
2	CO2	Student will able to Identify major research challenges and technical gaps existing between theory and practice in crypto currency domain.
3	CO3	Student will able to provides conceptual understanding of the function of Blockchain as a method of securing distributed ledgers, how consensus on their contents is achieved, and the new applications that they enable.
4	CO4	Student will able to Apply hyper ledger Fabric and Ethereum platform to implement the Block chain Application
5	CO5	Student will able to design applications based on blockchain technology for E-Governance, Land Registration, Medical Information Systems, and others

Syllabus:

Course Contents		Hours
Unit I	Introduction: Blockchain-History, Myths, Benefits, Limitations and Challenges of Blockchain, Structure of Blocks, Miners, Working of Blockchain, Types of Blockchain, Blockchain as Public Ledgers-Bitcoin, Blockchain 2.0, Smart Contracts, Transactions-Distributed	09

2. To improve department-industry collaboration, interaction with professional society through technical knowledge and internship program.
3. To promote research and development with current techniques through well qualified resources in the area of computer science and wireless engineering.

	Consensus, The Chain and the Longest Chain -Cryptocurrency to Blockchain 2.0 - Permissioned Model of Blockchain,	
Unit II	Blockchain Architecture and Cryptographic: Crypto Primitives, Permissioned Blockchain, Consensus mechanism, Cryptographic, Hash Function, Properties of a hash function-pointer and Merkle tree. Public key cryptosystems, private vs public blockchain. Introduction to cryptographic concepts required, Hashing, public key cryptosystems, private vs public blockchain and use cases,	07
Unit III	Bitcoin Consensus: Introduction to Bitcoin Blockchain, Transactions, Bitcoin limitations, Bitcoin Consensus, Proof of Work (PoW)-Hashcash PoW , Bitcoin PoW, Attacks on PoW ,monopoly problem-Proof of Stake-Proof of Burn - Proof of Elapsed Time - Bitcoin Miner, Mining Difficulty, Mining Pool-Permissioned model and use cases.	06
Unit IV	Cryptocurrency and Smart Contracts: Introduction, Ethereum blockchain, Elements of the Ethereum blockchain, IOTA, Namecoin. Legal Aspects Cryptocurrency Exchange, Black Market and Global Economy. Smart Contracts: Definition, DAO, Ricardian contracts, Precompiled contracts.	06
Unit V	Hyperledger Fabric: Architecture of Hyperledger fabric v1.1-Introduction to hyperledger fabric v1.1, chain code- Ethereum: Ethereum network, EVM, Transaction fee, Mist Browser, Ether, Gas, Solidity, Truffle Design and issue Crypto currency, Mining, DApps, DAO Blockchain Applications : Uses of Blockchain in E-Governance, Land Registration, Medical Information Systems, Finance, and others	08

3. To promote research and development with current techniques through well qualified resources in the area of computer science and wireless engineering.

Program: B. Tech. in Computer Science & Engineering

Semester	Course Code	Name of the course	L	T	P	Credits
V	CS5E001B	PEC-I (Cluster Computing)	3	0	0	3

Prerequisites for the course

1.	Understanding of CPU, memory hierarchy, cache, and instruction-level parallelism.
2.	Familiarity with distributed systems.

Prior Reading Material/useful links

1.	https://www.esds.co.in/blog/cluster-computing-definition-architecture-and-algorithms/
2.	https://www.tutorialspoint.com/what-is-cluster-computing

Course Outcomes:

Sr. No	Course Outcome No	CO statement
1	CO1	Student will be able to understand the concepts of cluster computing, and differentiate it from grid and cloud computing models.
2	CO2	Student will be able to Identify and analyse cluster hardware components, architectures, and resource management techniques for effective system design. .
3	CO3	Student will be able to Demonstrate the ability to plan, configure, and administer cluster environments, including network setup, monitoring, and job scheduling.
4	CO4	Student will be able to Apply parallel programming models such as MPI and Open MP to develop efficient distributed applications on cluster systems.
5	CO5	Student will be able to Explore advanced topics in cluster computing, including HPC, GPU acceleration, distributed file systems, and cloud-based cluster integration.

Syllabus:

Course Contents		Hours
Unit I	Introduction to Cluster Computing: Definitions and motivations, Types of parallel computers, Cluster vs. Grid vs. Cloud computing, Applications of cluster computing, Benefits and challenges.	08

1. To create self-learning environment by facilitating leadership qualities, team spirit and ethical responsibilities.
2. To improve department-industry collaboration, interaction with professional society through technical knowledge and internship program.
3. To promote research and development with current techniques through well qualified resources in the area of computer science and wireless engineering.

Unit II	Cluster Architecture: Cluster hardware: nodes, interconnects, and network topology, Cluster operating systems, Middleware and resource management, High availability and fault tolerance, Load balancing strategies.	08
Unit III	Cluster Setup and Administration: Planning and designing a cluster, Hardware and software configuration, Network setup and storage management, Cluster monitoring tools (e.g., Ganglia, Nagios), Job scheduling tools (e.g., PBS, SLURM).	08
Unit IV	Programming Models and Tools: MPI (Message Passing Interface), OpenMP for shared memory programming, Hybrid programming approaches, Remote Procedure Calls (RPCs), Debugging and profiling tools.	06
Unit V	Case studies and research trends: High Performance Computing (HPC), GPU clusters and accelerators, Distributed file systems (e.g., HDFS, Lustre) Cloud-based clusters (e.g., AWS, Google Cloud)	06

Text Books

1.	Rajkumar Buyya – High Performance Cluster Computing, Vol I & II.
2.	Thomas Rauber & Gudula Rünger – Parallel Programming: for Multicore and Cluster Systems

Reference Books

1.	High Performance Cluster Computing: Architectures and Systems, Vol. 1, Prentice Hall
2.	Grid and Cluster Computing, Prabhu C.S.R, PHI Learning Private Limited
3.	In search of clusters (2nd ed.), Gregory F. Pfister, IBM, Austin, TX, Prentice Hall

(An Autonomous Institute, with NAAC "A" Grade)

Affiliated to DBATU, RTMNU & MSBTE Mumbai

Department of Computer Science & Engineering

"A Place to Learn, A Chance to Grow"

VISION

To be recognized for excellent engineering, developing global leaders both in educational and research in the domain of computer science and wireless engineering.

MISSION

1. To create self-learning environment by facilitating leadership qualities, team spirit and ethical responsibilities.
2. To improve department-industry collaboration, interaction with professional society through technical knowledge and internship program.
3. To promote research and development with current techniques through well qualified resources in the area of computer science and wireless engineering.

Program: B. Tech. in Computer Science & Engineering

Semester	Course Code	Name of the course	L	T	P	Credits
V	CS5E001C	PEC-I (Interactive Graphics)	3	0	0	3

Prerequisites for the course

1.	Basics of Image, Graphics, Audio, Video etc.
2.	Generalize the knowledge about Interactive Computer Graphics's architecture, goals, etc .

Prior Reading Material/useful links

1.	https://www.javatpoint.com/interactive-and-passive-graphics
2.	https://www.coursera.org/learn/interactive-computer-graphics
3.	https://www.youtube.com/watch?v=UVCuWQV_-Es

Course Outcomes:

Sr. No	Course Outcome No	CO statement
1	CO1	Student will be able to understand the basic concepts of display techniques in computing.
2	CO2	Student will be able to analyse different display code generation and Graphical functions
3	CO3	Student will be able to interpret the Interactive graphical techniques
4	CO4	Student will be able to apply Two-dimensional Geometric Transformations.
5	CO5	Student will be able to develop 3-dimesional Transformations. Interactive Graphical Techniques GUI.

Syllabus:

Course Contents		Hours
Unit I	Display Devices: Line and point plotting systems: Raster, Vector, pixel and point plotters, Continual refresh and storage displays, Digital frame buffer, Plasma panel display, Very high resolution devices. High-speed drawing. Display processors. Character generators, Colour Display techniques (shadowmask and penetration CRT, colour look-up tables, analog false colours, hard copy colour printers).	09

2. To improve department-industry collaboration, interaction with professional society through technical knowledge and internship program.
3. To promote research and development with current techniques through well qualified resources in the area of computer science and wireless engineering.

Unit II	Display Description: Screen co-ordinates, user co-ordinates, Graphical data structures (compressed incremental list, vector list, use of homogeneous coordinates); Display code generation Graphical functions: the view algorithm. Two-dimensional transformation, Line drawing, Circle drawing algorithms.	06
Unit III	Interactive graphics: Pointing and positing devices (cursor, lightpen, digitizing tablet, the mouse, track balls). Interactive graphical techniques. Positioning (Elastic or Rubber Bank lines, Linking, zooming, panning clipping, windowing, scissoring). Mouse Programming.	06
Unit IV	Two-dimensional Geometric Transformations: Basic Transformations, Matrix Representation and Homogeneous Coordinates, Composite Transformations, Reflection and Shearing. Two-Dimension Viewing: The viewing Pipeline, Window to view port coordinate transformation, Clipping Operations, Point Clipping, Line Clipping, Polygon Clipping, Text Clipping, Exterior Clipping	07
Unit V	3-D Graphics: Wire-frame, perspective display, Perspective depth, projective transformations, Hidden line and surface elimination. Transparent solids, shading, Two dimensional Transformations. 3-dimesional Transformations. Interactive Graphical Techniques GUI.	08

Text Books

Program: B. Tech. in Computer Science & Engineering

Semester	Course Code	Name of the course	L	T	P	Credits
V	CS5E001D	PEC-I (Transmission Control System)	3	0	0	3

Prerequisites for the course

1.	Understand the principles of networking.
2.	Study the basics of protocol.

Prior Reading Material/useful links

1.	https://www.techtarget.com/searchnetworking/definition/TCP-IP
2.	https://www.youtube.com/watch?v=GfaHdjAphnU
3.	https://www.techtarget.com/searchnetworking/definition/TCP

Course Outcomes:

Sr. No	Course Outcome No.	CO statement
1	CO1	Student will be able to Understand Network Models and Protocol Layers.
2	CO2	Student will be able to Analyze TCP Header and Connection Management Mechanisms.
3	CO3	Student will be able to Apply Flow Control and Error Handling Techniques.
4	CO4	Student will be able to Evaluate Congestion Control Algorithms and TCP Variants.
5	CO5	Student will be able to Develop TCP-Based Network Applications and Analyze Traffic.

Syllabus:

Course Contents		Hours
Unit I	Introduction: Overview of network architectures, TCP/IP Stack, OSI and TCP/IP models, Role of protocols in networking, Transport Layer, Functions of the transport layer, Role of Transport Layer: TCP vs UDP, Services Provided by TCP, TCP Header Format and Fields, Port Numbers and Multiplexing/Demultiplexing.	7

2. To improve department-industry collaboration, interaction with professional society through technical knowledge and internship program.
3. To promote research and development with current techniques through well qualified resources in the area of computer science and wireless engineering.

Unit II	TCP Connection Management and State Transitions: TCP Connection Establishment: Three-Way Handshake, TCP Connection Termination: Four-Way Handshake, TCP States and State Diagram, Simultaneous Open/Close and Half-Closed Connections, TCP Timers: Retransmission, Persistence, Keep-alive, TIME_WAIT	7
Unit III	Flow Control and Error Recovery: Sliding Window Protocol, Receive/Send Buffers, Silly Window Syndrome (SWS) and Nagle's Algorithm, Acknowledgment Strategies: Cumulative ACK, Delayed ACK, Error Detection using Checksum, Timeout and Retransmissions, Retransmission Algorithms: Go-Back-N, Selective Repeat, SACK	7
Unit IV	Congestion Control and Performance: Causes of Network Congestion, Congestion Control Algorithms: Slow Start, Congestion Avoidance, Fast Retransmit and Fast Recovery, TCP Variants: Reno, Tahoe, Vegas (brief overview), TCP Performance Tuning and Optimization Techniques, TCP Over Wireless and Mobile Networks.	7
Unit V	Applications, Socket Programming & Analysis Tools: TCP Socket Programming Basics (C/Python), Client-Server Communication over TCP, Tools: Wireshark, TCPdump, Netstat, ss command, Packet Sniffing and TCP Flow Analysis, TCP Enhancements and Emerging Protocols: TCP Options (Window Scaling, Timestamps), Introduction to QUIC (vs TCP)	8

Program: B. Tech. in Computer Science & Engineering

Semester	Course Code	Name of the course	L	T	P	Credits
V	CS5E002A	PEC-II (Big Data Analytic Tools & Technique)	3	0	0	3

Prerequisites for the course

1.	Understand the key issues in big data management
2.	Study the tools and techniques required in handling large amounts of datasets.

Prior Reading Material/useful links

1.	https://sist.sathyabama.ac.in/sist_coursematerial/uploads/SIT1606.pdf
2.	https://www.getsmarter.com/blog/career-advice/big-data-analysis-techniques/

Course Outcomes:

Sr. No	Course Outcome No	CO statement
1	CO1	Student will able to Understand the key issues in big data management and its associated applications in intelligent business and scientific computing.
2	CO2	Student will able to Acquire fundamental enabling tools and techniques and scalable algorithms like Hadoop, Map Reduce and NO SQL in big data analytics
3	CO3	Student will able to Interpret business models and scientific computing paradigms, and apply software tools for big data analytics.
4	CO4	Student will able to Achieve adequate perspectives of big data analytics in various applications like recommender systems, social media applications etc.
5	CO5	Student will able to Develop Big Data Solutions using Hadoop Eco System

Syllabus:

Course Contents		Hours
Unit I	Introduction to Big Data: Introduction to Big Data, Big Data characteristics, types From 0-3 Data of Big Data,	7

3. To promote research and development with current techniques through well qualified resources in the area of computer science and wireless engineering.

	Traditional vs. Big Data business approach, Ref. Case Study of Big Data Solutions.	
Unit II	Introduction to Hadoop : What is Hadoop? Core Hadoop Components; Hadoop Ecosystem; Physical Architecture; Hadoop limitations.	6
Unit III	NoSQL : What is NoSQL? NoSQL business drivers, NoSQL case studies, NoSQL data architecture patterns: Key-value stores, Graph stores, Column family (Bigtable) stores, Document stores, Variations of NoSQL architectural patterns; Using NoSQL to manage big data: What is a big data NoSQL solution? Understanding the types of big data problems; analyzing big data with a shared-nothing architecture; choosing distribution models: master-slave versus peer-to-peer; four ways that NoSQL systems handle big data problems	7
Unit IV	Map Reduce and the New Software : Distributed File Systems: Physical Organization of Compute Nodes, Large-Scale File-System Organization. MapReduce: The Map Tasks, Grouping by Key, The Reduce Tasks, Combiners, Details of MapReduce Execution, Coping With Node Failures. Algorithms Using MapReduce: Matrix-Vector Multiplication by MapReduce, Relational-Algebra Operations, Computing Selections by MapReduce, Computing Projections by MapReduce, Union, Intersection, and Difference by MapReduce, Computing Natural Join by MapReduce, Grouping and Aggregation by MapReduce, Matrix Multiplication, Matrix Multiplication with One MapReduce Step.	10
Unit V	Finding Similar Item : Applications of Near-Neighbor Search, Jaccard Similarity of Sets, Similarity of Documents, Collaborative Filtering as a Similar-Sets Problem .	6

Program: B. Tech. in Computer Science & Engineering

Semester	Course Code	Name of the course	L	T	P	Credits
V	CS5E002C	PEC-II (React JS)	3	0	0	3

Prerequisites for the course

1.	Basics of Java Programming
2.	Fundamental of AngularJS

Prior Reading Material/useful links

1.	https://www.w3schools.com/angular/
2.	https://www.tutorialspoint.com/angularjs/index.htm
3.	https://www.javatpoint.com/angularjs-tutorial

Course Outcomes:

Sr. No	Course Outcome No	CO statement
1	CO1	Student will be able to Understand fundamentals of React JS and component-based architecture.
2	CO2	Student will be able to Develop user interfaces using JSX and React components.
3	CO3	Student will be able to Implement state management and event handling in React applications.
4	CO4	Student will be able to Use React Router and APIs to build dynamic web applications..
5	CO5	Student will be able to Develop and deploy responsive single-page React applications.

Syllabus:

Course Contents		Hours
Unit I	Introduction to React JS: Introduction to Frontend Frameworks, Basics of React JS, Features of React, Installation & Setup, JSX Syntax, Virtual DOM, Components and Props	7
Unit II	React Components & State: Functional Components, Class Components, State and Props, Event Handling, Conditional Rendering, Lists and Keys, Forms in React	8

Sr. No	Course Outcome No	CO statement
1	CO1	Students will explain and properly document the process of digital forensics analysis.
2	CO2	Students will gain an understanding of the tradeoffs and differences between various forensic tools.
3	CO3	Students will be able to describe the representation and organization of data and metadata within modern computer systems.
4	CO4	Students will be able to create disk images, recover deleted files and extract hidden information.
5	CO5	Students will be introduced to the current research in computer forensics. This will encourage them to define research problems and develop effective solutions.

Syllabus:

Course Contents		Hours
Unit I	Cyber Crime and computer crime: Introduction to Digital Forensics, Definition and types of cybercrimes, electronic evidence and handling, electronic media, collection, searching and storage of	08

Department of Computer Science & Engineering

"A Place to Learn, A Chance to Grow"

VISION

To be recognized for excellent engineering, developing global leaders both in educational and research in the domain of computer science and wireless engineering.

MISSION

1. To create self-learning environment by facilitating leadership qualities, team spirit and ethical responsibilities.
2. To improve department-industry collaboration, interaction with professional society through technical knowledge and internship program.
3. To promote research and development with current techniques through well qualified resources in the area of computer science and wireless engineering.

	electronic media, introduction to internet crimes, hacking and cracking, credit card and ATM frauds, web technology, cryptography, emerging digital crimes and modules.	
Unit II	Cyber Laws: Security Assurance, Security Laws, IPR, International Standards, Security Audit, SSE-CMM/COBIT etc.	06
Unit III	Computer Forensics: Definition and Cardinal Rules, Data Acquisition and Authentication Process, Windows Systems-FAT12, FAT16, FAT32 and NTFS, UNIX file Systems, mac file systems, computer artifacts, Internet Artifacts, OS Artifacts and their forensic applications.	06
Unit IV	Forensic Tools and Processing of Electronic Evidence: Introduction to Forensic Tools, Usage of Slack space, tools for Disk Imaging, Data Recovery, Vulnerability Assessment Tools, Encase and FTK tools, Anti Forensics and probable counters, retrieving information.	08
Unit V	Process of computer forensics and digital investigations : Processing of digital evidence, digital images damaged SIM and data recovery, multimedia evidence, retrieving deleted data: desktops, laptops and mobiles, retrieving data from slack space, renamed file, ghosting, compressed files.	09

Program: B. Tech. in Computer Science & Engineering

Semester	Course Code	Name of the course	L	T	P	Credits
V	CS5M003	MDM-III (Prompt Engineering)	2	0	0	2

Prerequisites for the course

1.	Basic knowledge of Python programming.
2.	Introductory understanding of machine learning or AI concepts.

Prior Reading Material/useful links

1	OpenAI Documentation
2	HuggingFace Transformers
3	Google AI Blog: Prompting Techniques

Course Outcomes:

Sr. No	Course Outcome No	CO statement
1	CO1	Students will be able to Understand and apply basic and advanced prompt engineering techniques.
2	CO2	Students will be able to Integrate and utilize APIs to build AI applications.
3	CO3	Students will be able to Design and implement AI-powered chatbots and utilities.
4	CO4	Students will be able to Optimize generative AI applications for latency and cost.
5	CO5	Students will be able to Evaluate prompt performance and select appropriate fallback strategies.

Syllabus:

Course Contents		Hours
Unit I	Foundations of Prompt Engineering: Introduction to Prompt Engineering, Structure of a prompt, Instruction, Context, Input, Output, Zero-shot, One-shot, Few-shot prompting, Role prompting and system messages.	05
Unit II	Advanced Prompt Engineering: Chain-of-thought prompting, Temperature, top-p, and max tokens, Prompt tuning and embedding-based	05

Program: B. Tech. in Computer Science & Engineering

Semester	Course Code	Name of the course	L	T	P	Credits
V	CS5O003	Open Elective-III (Advanced Business Application Programming)	2	0	0	2

Prerequisites for the course

1.	Knowledge of Object-Oriented Programming.
2.	Knowledge of security protocols for user authentication.

Prior Reading Material/useful links

1.	https://www.geeksforgeeks.org/sap-advanced-business-application-programming-abap/
2.	https://www.techtarget.com/searchsap/definition/ABAP

Course Outcomes:

Sr. No	Course Outcome No	CO statement
1	CO1	Student will able to Apply advanced Object-Oriented Programming (OOP) principles for business applications.
2	CO2	Student will able to Build end-to-end web applications using modern back-end frameworks and front-end frameworks.
3	CO3	Student will able to Design and develop applications using monolithic, microservices, and event-driven architectures.
4	CO4	Student will able to Integrate security best practices, such as authentication, authorization, encryption, and prevent common vulnerabilities.
5	CO5	Student will able to Deploy and manage business applications in cloud environments.

Syllabus:

Course Contents		Hours
Unit I	Advanced Programming Concepts and Object-Oriented Design: Basic of Programming and Object-Oriented Design Focuses on advanced OOP principles, design patterns (Factory, Singleton, etc.), and data structures. Design scalable and reusable business logic, SOLID principles to improve software design.	06

Program: B. Tech. in Computer Science & Engineering

Semester	Course Code	Name of the course	L	T	P	Credits
V	CS5L004	Database Management Systems Lab	0	0	2	1

Prerequisites for the course

1.	Understand Basics of Discrete Mathematics
2.	Fundamental of SQL.

Prior Reading Material/useful links

1.	https://onlinecourses.nptel.ac.in/noc23_cs29/preview
2.	https://www.techtarget.com/searchdatamanagement/definition/database-management-system
3.	https://www.youtube.com/watch?v=c5HAWKX-suM

Course Outcomes:

Sr. No	Course Outcome No	CO statement
1	CO1	Student will be able to Apply the basic concepts of Database Systems and Applications.
2	CO2	Student will be able to Use the basics of SQL and construct queries using SQL in database creation and interaction.
3	CO3	Student will be able to Design a commercial relational database system (Oracle, MySQL) by writing SQL using the system.
4	CO4	Student will be able to analyse and Select storage and recovery techniques of database system.
5	CO5	Student will be able to Design the File Organization, Indexing and Hashing and exhibit the knowledge of transaction and concurrency control.

Course Contents List of Practical's

		Hours
0	Introduction to Database Management Lab.	02
1	Creating tables, Renaming tables, Data constraints (Primary key, Foreign key, Not Null), Data insertion into a table.	02
2	Grouping data, aggregate functions, Oracle functions (mathematical, character functions).	02

Course Outcomes:

Sr. No	Course Outcome No	CO statement
1	CO1	Students will able to creation of new technologies or innovations.
2	CO2	Students will able to address complex problems or challenges
3	CO3	Students will able to develop new computational models or simulations that help advance their research.
4	CO4	Students will able to create new products or services that can be commercialized.
5	CO5	Students will able to impact various aspects of society, from improving productivity and efficiency to enhancing user experience and addressing social challenges.

This is continuous work to the Mini Project phase I. Every student will have to submit a completed report (1 copy) * of the project work. Report preparation guidelines should be followed as per given format. The students will prepare a power point presentation of the work. Panel of examiners comprising of guide, internal examiner, senior faculty, external examiner, etc. will assess the performance of the students considering their quality of work.

Mini Project Phase I

1. Group Formation.
2. Domain Selection.
3. Guide Allotment
4. Title Finalization.

(An Autonomous Institute, with NAAC "A" Grade)

Affiliated to DBATU, RTMNU & MSBTE Mumbai

Department of Computer Science & Engineering

"A Place to Learn, A Chance to Grow"

VISION

To be recognized for excellent engineering, developing global leaders both in educational and research in the domain of computer science and wireless engineering.

MISSION

1. To create self-learning environment by facilitating leadership qualities, team spirit and ethical responsibilities.
2. To improve department-industry collaboration, interaction with professional society through technical knowledge and internship program.
3. To promote research and development with current techniques through well qualified resources in the area of computer science and wireless engineering.

Program: B. Tech. in Computer Science & Engineering

Semester	Course Code	Name of the course	L	T	P	Credits
V	CS5I001	Internship-I	0	0	4	2

Prerequisites for the course

1.	Basics of Internet Programming like coding, designing, Testing.
2.	Fundamental Knowledge of Computing and Programming.

Prior Reading Material/useful links

Course Outcomes:

Sr. No	Course Outcome No	CO statement
1	CO1	Students will be able to understand the appropriate workplace behaviours in a professional setting.
2	CO2	Students will be able to demonstrate content knowledge appropriate to job assignment.
3	CO3	Students will be able to exhibit evidence of increased content knowledge gained through practical experience.
4	CO4	Students will be able to explain how the internship placement site fits into their broader career field.
5	CO5	Students will be able to evaluate the internship experience in terms of their personal, educational and career needs..

Course Details:

Provides the student with an opportunity to gain knowledge and skills from a planned work experience in the student's chosen career field. In addition to meeting Core Learning Outcomes, jointly developed Specific Learning Outcomes are selected and evaluated by the Faculty Internship Advisor, Worksite Supervisor, and the student. Internship placements are directly related to the student's program of study and provide learning experiences not available in the classroom setting. Internships provide entry-level, career-related experience, and

workplace competencies that employer's value when hiring new employees. Internships may also be used as an opportunity to explore career fields. Students must meet with the Internship & Apprenticeship Coordinator prior to registering. The purpose of the Internship Program is to provide each student practical experience in a standard work environment. The Internship & Apprenticeship Coordinator and Faculty Internship Advisor will assist students in making the job a valuable and productive experience. Success in this job will help ensure development of skills necessary for a lasting and rewarding career in the future.

Course Outcomes:

Sr. No	Course Outcome No	CO statement
1	CO1	Student will able to analyse mathematical concepts related to ratios, proportions, partnerships, and age problems to solve both theoretical and practical scenarios.
2	CO2	Student will able to evaluate profit and loss concepts to solve problems involving cost price, selling price, marked price, and discounts effectively.
3	CO3	Student will able to perform efficiently in personal interviews by applying etiquette, self-presentation, and common interview strategies.
4	CO4	Student will able to express opinions clearly in a group setting and to demonstrate teamwork, listening, and conflict resolution skills.
5	CO5	Student will able to develop arguments with evidence and examples and structure essays logically with a clear introduction, body, and conclusion.

Syllabus:

Course Contents		Hours
Unit I	Mixture and Allegation, Time and work, Speed time and distance: Problems on mixtures, Problems on allegations with two and three compounds. Problems on unitary methods, Problems on alternate days and wages, Problems on chain-rule, Problems on pipes and cisterns. Problems on speed-distance-	6
