

Q1 of 3

Which of the following statements is incorrect about the comparison between big data solutions like Hadoop and data warehouse solutions like Teradata?

☒ DWH systems mostly deal with semi structured and unstructured data while BD systems mainly deal with structured data. ✓

☐ DWH systems use relational data bases for storage while BD systems use distributed files systems.

☐ A traditional data warehouse tester cannot be used as a substitute for a big data tester.

☐ Traditional data warehouses can be integrated with big data systems to get the best of the both worlds.

Q2 of 3

What is the correct classification of digital data?

- ☐ Structured Data Only
- ☐ Unstructured Data Only
- ☐ Semi-Structured Data Only
- ☒ All of the above ✓

Explanation :

In the present day digital era, the data that is generated from the real world applications can be of structured format, semi-structured or unstructured format.

Q3 of 3

Why should traditional IT systems be integrated with big data technologies like Hadoop?

- ☒ Integrating the data from legacy system and big data storage makes it possible to use the existing data analysis capability ✓
- ☐ Data warehousing and business intelligence
- ☐ Management of Hadoop clusters
- ☐ Collecting and storing unstructured data

Explanation :

As big data technologies support storing all the formats of data, its better to integrate data from various sources onto hadoop platform which

Q1 of 1

Following are the focus of which type of big data testing:

- Role based security testing
- Impersonation validation
- Default permission configuration check
- Data node direct access validation

☒ Security Testing ✓

☐ Data Migration Testing

☐ Data Acquisition & Integration Testing

☐ Data Analytics & Visualizations Testing

Q1 of 2

Which of the following are the key functions of Data ingestion?

- ☐ Detecting changed data
- ☐ Ability to configure data ingestion for multiple Speed/frequency of ingestion.
- ☐ Ability to connect to multiple source systems
- ☒ All of the above ✓

Explanation :

The key functions of data ingestion are to validate the data collected from source, routing the data to one or more data sources.

Q2 of 2

In this type of bigdata testing, following points will be tested.

- Data processing/ETL Test Strategy
- Data Extraction validation
- Data storage in HDFS, NoSQL DB validation
- Input/output schema format validation

☐ Security Testing

☐ Data Migration Testing

☐ Performance Testing

☒ Data Acquisition & Integration Testing

Q1 of 2

In this Bigdata testing following are the focus:

- BI Layer Test Strategy
- Report objects validation (Metrics and dimension objects)
- Reports validation
- Dashboards validation

Identify type of testing to be done.

Data Analytics & Visualizations Testing

Data Acquisition & Integration Testing

Data Migration Testing

All of the above

Q2 of 2

Operations head is approaches the CIO of the chain check possibility of using bigdata in decision making process. They are want to evaluate if the exiting employees in software testing department will be able to do the required testing. What is the opinion of the CIO

- ☐ No they can not. It is totally differennt
- ☒ They can with some training ✓
- ☐ They can do the testing without any extra training

Explanation :

People who are already trained in testing have a basic knowledge of what testing is. With the prior knowledge of testing they can scale up

FINAL ASSESMENT

Q.1 Which of the following skills do you need to be a big data tester?

- a. Any scripting language for file handling
- b. Failover testing skills
- c. Understanding the big data solution
- d. Expert knowledge in Java programming

Answer:

a, b, c ✓

Q.2 What is the HDFS mechanism in which data in a particular node is backed up in other nodes to prevent the data loss?

- a. Compaction
- b. Replication
- c. Segregation
- d. None of the above

Answer:

b. Replication ✓

Q.3 If you are planning to scale up in big data testing, what are the areas which you would have to learn initially?

- a. Learn big data solutions like Hadoop or NoSQL DB to work on
- b. Gain basic knowledge on Data analytics
- c. Learn scripting used for data handling techniques like Unix Shell Scripting
- d. Learn MapReduce programming in detail

Answer:

a, b, c ✓

Q.4 Which of the following data ingestion mechanisms is used for moving voluminous streaming data (such as RDBMS) into HDFS?

- a. Sqoop
- b. HIVE
- c. Flume
- d. HBASE

Answer:

a. Sqoop ✓

Q.5 While performing big data testing, you found that there are multiple duplicate entries of data in the big data store. In which phase of Big Data Testing would you have discovered this?

- a. Data Analytics & Visualizations Testing
- b. Data Migration Testing
- c. Data Acquisition & Integration Testing
- d. Data Quality Testing

Answer:

d. Data Quality Testing ✓

Q.6 Majority of Map Reduce and Pig Jobs are validated in which phase of Big Data Testing?

- a. Data ingestion testing
- b. Data mining or data processing testing
- c. Data quality testing
- d. Data analytics and visualization

Answer:

b. Data mining or data processing testing ✓

Q.7 You are assigned to a big data testing project. You would be testing the data ingestion process. If you have already have work experience in DWT, what are the questions you would have to get answered first before starting?

- a. Which big data solution is being used?
- b. What are the sources of data?
- c. Who have developed the program?
- d. What are the transformation logics adopted?

Answer:

a, b, d ✓

Q.8 Which of the following data ingestion mechanisms is used for moving voluminous streaming data (such as web logs) into HDFS?

- a. Sqoop
- b. HIVE
- c. Flume
- d. HBASE

Answer:

c. Flume ✓

Q.9 Which of HIVE table format is used to store data permanently in HDFS?

- a. Managed
- b. External
- c. Internal
- d. None of the above

Answer:

a. Managed ✓

Q.10 You are assigned to validate a report created on sales data. You find that the report does not contain data for a particular department 'ABC'. What might be the possible reasons for the same?

- a. Data was not loaded to the data source because of incorrect transformation logic.
- b. Duplication of data.
- c. Numbers are not formatted to correct decimal point or rounded as per specification

d. In the reporting tool, incorrect filter logic prevented the data from Dept ABC from being displayed.

Answer:

a. Data was not loaded to the data source because of incorrect transformation logic ✓

d. In the reporting tool, incorrect filter logic prevented the data from Dept ABC from being displayed ✓

Q.11 If the source data extracted from OLTP system is in CSV format and Target Data stored in HDFS is in AVRO format, what are the ways in which you can validate that the data has been correctly loaded?

a. Download the AVRO file to the native file system and convert it to CSV format using a tool. Then compare the data using a file comparator.

b. Upload the AVRO file to a HIVE table. Extract the data from the HIVE table in CSV format. Then use this file to compare it with the source file.

c. These two files in different systems cannot be compared

d. We can directly compare the CSV and AVRO files

Answer:

a and b ✓

Q.12 Which of the document formats does Mongo DB use for storage?

a. JSON

b. AVRO

c. PARQUET

d. ORC

Answer:

a. JSON ✓

Q.13 In Hadoop framework, which works with a variety of related tools, the common cohorts include:

a. MapReduce, Hive and HBase

b. MapReduce, MySQL and Google Apps

c. MapReduce, Hummer and Iguana

d. MapReduce, Heron and Trumpet

Answer:

a. MapReduce, Hive and HBase ✓
