

Unit-3

Computer Forensics

1 Mark Questions (Very Short Answer)

1. Define Computer Forensics.
 2. Expand FAT and NTFS.
 3. Name any two UNIX file systems.
 4. What is meant by “Data Acquisition” in forensics?
 5. Give one example of an Internet Artifact.
-

2 Marks Questions (Short Answer)

1. State any two cardinal rules of computer forensics.
 2. Differentiate between FAT16 and FAT32.
 3. What is the purpose of authentication in the forensic process?
 4. List two examples of computer artifacts.
 5. What is the significance of OS artifacts in forensic investigation?
-

4 Marks Questions (Brief Explanation)

1. Explain the process of data acquisition in computer forensics.
 2. Compare FAT file system with NTFS with respect to security and efficiency.
 3. Describe the importance of Internet artifacts in forensic investigations.
 4. Write short notes on UNIX file systems used in forensics.
 5. Explain any two forensic applications of OS artifacts with examples.
-

6 Marks Questions (Detailed Answer)

1. Discuss in detail the cardinal rules of computer forensics with examples.
2. Explain Windows file systems (FAT12, FAT16, FAT32, NTFS) and their forensic importance.
3. Describe the authentication process of electronic evidence in forensic science.
4. Explain different types of artifacts (Computer, Internet, OS) and their forensic applications.
5. Compare and contrast Windows, UNIX, and Mac file systems from a forensic perspective.
